I'm trying to send email with activation link whenever a new user register on my website. But I'm getting activation failure after sending the email from localhost (SQL Server Express) This is what I've tried - Enabling Database Mail sp_configure 'show advanced options'; reconfigure; sp_configure 'Database Mail XPs'; reconfigure; - Creating a Profile EXECUTE master.. sp_MSsetmailmethod 'DM method'; The Data-Matthews method (DM method) is a method for real options valuation The method provides an easy way to determine the real option value of a project simply. - Create a Mail account for gmail We have to use our company mail account.

dbo.sysmail_mail_profile_sp @profile_name = 'Send_Mail', @description = 'Sending Mail On Register and on some other activity.

@MailMail
