III. RESULTS AND DISCUSSION

The variation of flexural stresses, strains at mid span and shear stresses near support were evaluated for various L/D ratios.

2.6. Variation of Flexural Strain

The variations of flexural strain were plotted at mid span of the beam for different L/D ratios. It was found that behaviour of flexural strain variation was non-linear. Also it was found that as the L/D ratio decreases the more pronounced was the deviation of strain pattern at mid-section of the beam. Fig.6.a to Fig.6.c were shown the variation of flexural strain at mid span for different L/D ratios.

Figure 6.a. Flexural strain distribution for L/D = 1.71

Figure 6.b. Flexural strain distribution for L/D = 1.6

Figure 6.c. Flexural strain distribution for L/D = 1.5
